

How to use Garlic Pharm Concentrate:

Mixing Instructions: 6 ounces of Garlic Pharm Concentrate to one gallon of water.

For Best Results:

3-5 days after using one of our Insecticidal Soap Plus, mix and apply a fine spray of Garlic Pharm to the leaves of your plants. Apply in the evening to avoid summer sun and lengthen drying time.

Using Garlic Pharm as a repellent between applications of Insecticidal Soap Plus, will lessen the use of the soap and repel insects in a very natural way. The garlic aroma dissipates rapidly to humans but is still very offensive to insects. Repeat after rain. When insects reappear, as we know they will, use one of our Insecticidal Soaps Plus again and repeat the process.

Please do not open indoors.

Happy Gardening,

The Staff at Pharm Solutions.
